

Bridge Street Market

Grand Rapids, MI | Parking Structure

THE CHALLENGE

The Bridge Street Market is a grocery store in downtown Grand Rapids, MI. A parking structure provided maximum space to allow fluent traffic in busy locations. The design team made a late addition of precast framing for solar panels on the roof of the parking structure.

THE SOLUTION

Precast made all of this possible. It not only eliminated additional trades, but it allowed the solar frame to be installed concurrently with the parking structure. With precast concrete, all the product was made at our production facility and shipped to the site daily to be installed into place.

THE RESULT

The solar panel canopy is environmentally friendly and gives shade to vehicles parked on the roof level. The high-quality concrete used provided the customer with a durable, high quality product that will last for many years.

“

Kerkstra was easy to work with. Their knowledge on schedule and sequencing of the parking structure allowed us to take the appropriate time to facilitate logistics. Once construction started on the precast parking deck, I was impressed with how quickly things moved along!
