

Heeren Brothers Produce

Comstock Park, MI | Industrial

THE CHALLENGE

Heeren Brother's Produce required additional storage. The new building expanded their storage and processing capabilities as well as helped save energy and comply with the latest food safety regulations.

THE SOLUTION

Stained panels with reveals on the exterior of the building create a crisp and clean look that will last for years to come. A steel troweled, food-grade finish is found on the interior of the apple processing area. This finish reduces the risk of bacteria settling on surfaces within the building.

THE RESULT

The facility features precast exterior walls and also precast interior wall panels which help section off the building into several different climate controlled zones for several processes that the produce must go through.

Total Product Square Footage: 93,101
