

Michigan State University

East Lansing, MI | Parking Structure

THE CHALLENGE

This Michigan State University parking structure is a Brownfield redevelopment project of the old Michigan State Police Training Center. The parking structure was a critical portion of the project, in order for the remainder of the project to be successful the parking structure had to be constructed during winter conditions.

THE SOLUTION

The 173,221 square feet of pre-topped double tees allowed the parking structure to be installed with minimal cast in place concrete work under the cold winter conditions.

THE RESULT

The parking structure replaced a large surface lot which was being removed for other structures, including student housing and an administration office for MSU students and employees.

Total Product Square Footage: 198,121
